

## Queensborough Gateway Feature

Future growth and changing traffic patterns in Queensborough could eventually warrant increased traffic control at the intersection of **Howes Street and Even Avenue**. This change could be used to introduce a gateway feature to the neighbourhood.

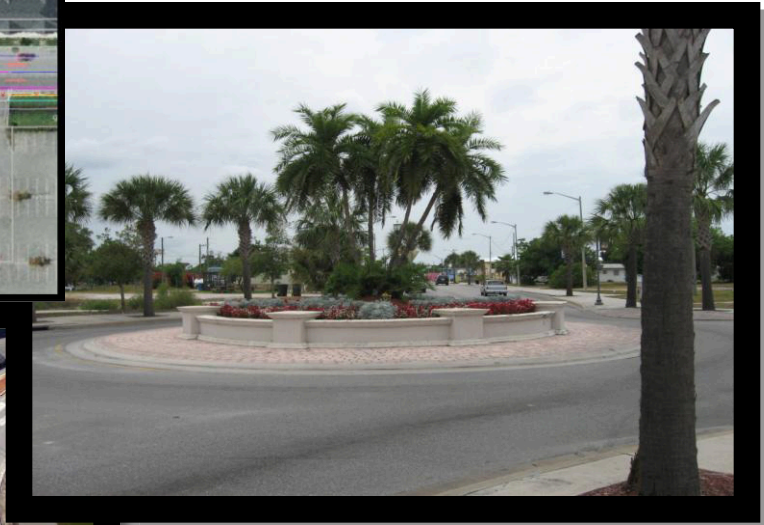

Two options are available: A modern roundabout or a traditional signalized intersection.

### Modern Roundabout

### Advantages:

- Traffic Calming
- Attractive median landscaping can enhance the Gateway Feature
- Increased Safety

### Signalized Intersection

### Advantages:

- Familiar to use
- Minimal interference to operations during construction
