6.0 **BACKGROUND**

6.1 Queensborough is located within the Fraser River Floodplain and protected from flooding by a perimeter dyke. The internal drainage is controlled by a system of storm sewers, ditches, culverts and four perimeter drainage pump stations. The City is planning to replace the existing drainage pump station on Wood Street with a new pump station due to the aging of the pumps and structures as well as increasing pump capacity. The existing Wood Street Drainage Pump Station was built on wood piles and it includes three submersible pumps, one duty pump and two main pumps (60 and 75 hp), a flood box (1.2 m x 1.2 m) and two discharge steel pipes (750 mm and 650 mm). In 1999, the station was upgraded to include a new submersible 60 hp pump, conversion of operating voltage to standard 600 V, a new motor for the existing pump and a new control panel. Appendix C shows the site plan of the pump station.

6.2 The City has recently completed Queensborough Integrated Rainwater Management Plan (IRMP) including modelling of the drainage system and drainage system analysis. The model was run with a number of scenarios that simulate rainfall events with a 25-year return period, 12-hour duration rainfall event, and tidal condition higher than the flood boxes. Based on the modelling results, the Wood Street Pump station shall be designed to handle the future flow of 2.0 m³/s.

6.3 In addition to a multi-disciplinary technical team, the City is seeking a proactive and experienced public consultation approach to engage the community and ensure their needs are met.
